Summary

Senior frontend engineer (SDE 3) with 5+ years building React.js web applications and cross-platform iOS and Android applications with React Native for US, Canadian, and UAE clients. Technical owner of an offline-first healthcare mobile app shipped to iOS and Android, processing 10,000 appointments/day on React Native, Expo, AWS Lambda, AWS Amplify, and AWS AppSync. Experienced across the Node.js backend layer of an existing production codebase, micro-frontend architecture with Nuxt.js, and AI engineering - multi-agent orchestration, LLM integration, and custom MCP (Model Context Protocol) servers. Led frontend teams of 4–5 engineers in Agile/Scrum environments across React web and React Native.

Professional Experience

Senior Software Engineer (SDE 3) – iResponsive Offshore Development Center Private Limited

May 2023 – May 2026 | Coimbatore, India (Remote)

- Led end-to-end development of a US client's offline-first healthcare application for iOS and Android using React Native, Expo, AWS Lambda, AWS Amplify, and AWS AppSync, processing 10,000 appointments/day.
- Architected the offline synchronization and real-time data layer for appointment processing in low-connectivity environments, preventing data loss in 95% of cases, and engineered the data flow architecture to maintain HIPAA and GDPR compliance for protected health information (PHI).
- Built the application architecture from scratch as technical owner and implemented metrics and logging pipelines into LogZ for observability, accelerating release cadence from monthly to bi-weekly.
- Designed and built a task workflow engine covering the full appointment workflow, integrated with offline handling, including an algorithm that determines the next task from the previous task's outcome against a pre-defined dynamic workflow structure.
- Engineered dynamic route rendering logic that created a navigation stack entry per task type, reducing conditional rendering overhead and eliminating task-tracking issues in native iOS and Android navigation.
- Implemented background location tracking at 5-second intervals across iOS and Android in React Native, achieving a 95% capture rate; later redesigned the feature's memory management approach, eliminating crashes on both platforms and ensuring continuous tracking reliability.
- Owned the mobile release process, managing Google Play deployments and distributing EAS Build artifacts to testers through Firebase App Distribution.
- Led a development team of 5 engineers in an Agile/Scrum environment, running sprint planning and reviews while overseeing offline synchronization and existing functionality performance across new feature delivery and bug fixes.
- Coordinated directly with product teams to translate business requirements into technical solutions, and mentored engineers on React and React Native best practices, reducing code review cycles by 2 days.
- Maintained and enhanced an existing Canadian client's appointment booking web platform by building a new reconciliation flow across existing Node.js repositories alongside the React frontend, and shipped features and fixes on the staff-facing in-store React Native app, reducing in-person customer wait time by 30%.
- Researched and built a proof-of-concept micro-frontend architecture using Nuxt.js with CI/CD integration across multiple teams and repositories; the POC became the architectural baseline for the US client's multi-service web portal.
- Built Githena, an event-driven multi-agent PR reviewer: six specialized LLM agents coordinated by a supervisor quality gate, triggered through GitHub webhooks, posting a single auditable review within 60 seconds of PR readiness with per-repo behavior driven by config files.
- Engineered custom MCP (Model Context Protocol) server integrations connecting LLMs to internal systems and project-specific data sources, and established agentic coding workflows with Claude Code plus reusable prompt-engineering patterns adopted across the team.
- Designed an OAuth 2.0-to-Cognito authentication bridge: on every login, programmatically created the user in AWS Cognito and stored device-side credentials, enabling secure AppSync communication while preserving the existing OAuth authentication context.
- Architected a source-of-truth sync pipeline using a Lambda function that consumed DynamoDB Streams (CDC) and replicated changes to the Postgres system of record via REST API, eliminating data inconsistency between the mobile offline DB and the source-of-truth database.

Software Development Engineer 2 (SDE 2) – Aveon Infotech Private Limited

Apr 2022 – Apr 2023 | Coimbatore, India (Remote)

- Led a 4-person frontend team (2 React web developers, 2 React Native developers) in an Agile/Scrum environment to build forum functionality within a School Management System enabling staff to post school articles and blogs, adopting Material UI and Fluent UI; reduced advertising overhead and increased internal visibility by 50%.
- Led a 4-person frontend team (3 web developers, 1 React Native developer) to deliver a React-based admin web platform and a companion React Native iOS and Android app for a blood-donor platform, supporting 500+ donation requests.
- Implemented React Context API to manage and persist authentication state across the frontend, centralizing user session data and eliminating prop-drilling across nested component trees.

Frontend Developer – Leora Solutions LLC

Jul 2021 – Mar 2022 | Dubai, United Arab Emirates (Remote from India)

- Delivered React web applications remotely for UAE-based clients across business management, digitalization, and school management domains, working directly with Dubai-based teams.
- Built the frontend for Soutrali, a UAE cab-booking administration platform, cutting cash transactions by 90%.
- Developed personalized advertisement and discount features for EzWalkin, a UAE mall customer-engagement platform, contributing to a 20% increase in sales.
- Engineered reusable UI components, custom hooks, and Redux-based authentication workflows, improving development speed and component reuse by 50%.

React Developer – Leora Solutions LLP

Jun 2020 – Jul 2021 | Kerala, India (Remote)

- Delivered React applications for UAE-based clients across business management, digitalization, and school management domains, managing requirements directly with Gulf-region stakeholders.
- Built an admin portal in React for QR-code-based business digitization, enabling QR generation, scanning, and centralized business detail management for UAE clients.
- Developed a responsive React platform for school management with live tracking and QR-based checkpoint scanning, giving administrators 100% visibility into classroom attendance and schedule alignment.
- Built a React business management dashboard with Chart.js visualizations and Material UI components to track sales and targets, reducing manual reporting time by 90%.
- Developed a React visitor management system with meeting/appointment scheduling and digital pass issuance, achieving 100% digital visitor tracking.

Achievements

- Contributed merged documentation improvements to electric-sql/electric (10.3k★, Apache-2.0), adding cross-links that improved discoverability of error-handling guidance for end users; merged by maintainer within 33 hours of submission.
- Collaborated directly with OSS maintainers, incorporating feedback professionally to uphold engineering quality standards.

Technical Skills

Frontend Development: React.js, Next.js, Nuxt.js, Vue.js, JavaScript, TypeScript, HTML5, CSS3, Redux, Zustand, React Query, Material UI, Fluent UI, Tailwind CSS, SASS/SCSS, styled-components, Chart.js, Responsive Design, Custom Hooks, Component Architecture

Mobile Development: React Native, iOS, Android, Cross-Platform Mobile Development, Expo, EAS Build, React Navigation, Offline-First Mobile Architecture, Background Location Services, Push Notifications, Google Play Deployment, Firebase App Distribution

Backend & APIs: Node.js, AWS AppSync (managed GraphQL), REST APIs, Firebase

Cloud & AWS: AWS Lambda, AWS Amplify, AWS AppSync, Serverless Architecture

AI Engineering: Multi-Agent Orchestration, LLM Integration, Model Context Protocol (MCP), Prompt Engineering, Retrieval-Augmented Generation (RAG), Claude Code, AI-Assisted Development

Architecture & Systems Design: Offline-First Architecture, Offline Synchronization, Real-Time Data Processing, Micro-Frontend Architecture, Microservices, Workflow Engine Design, Software Architecture

DevOps & Tooling: Git, GitHub, GitHub Actions, Docker, Jenkins, CI/CD, LogZ

Working Knowledge: Webpack, Vite, Amazon DynamoDB

Compliance & Domain: HIPAA, GDPR, Protected Health Information (PHI) data-flow design, Healthcare Technology

Leadership & Practice: Agile, Scrum, Technical Team Leadership (4–5 engineers), Mentoring, Cross-Functional Collaboration, Stakeholder Management, Requirements Gathering, Test-Driven Development (TDD)

Education

Anna University – Chennai, IN

2018-2022

Bachelor of Technology (B.Tech), Information Technology

CGPA 8.49

Certifications

React – The Complete Guide (incl. Hooks, React Router, Redux) – Udemy

2020
